Amama tech: what why and how?
1. THE PROBLEM
India = 2nd-largest producer of perishables in the world
Yet only ~1% is exported (China is #1)
Root cause: the export supply chain is broken at every link
2. WHY IT EXISTS & WHY IT MATTERS
Huge domestic consumption - producers don't need to risk exporting
Anyone who tries loses money once or twice, then quits (keeps exports stuck at ~1%)
Government wants perishable exports to grow, but the ecosystem doesn't support it
Massive untapped opportunity; farmers & traders leave money on the table
3. WHY THE CHAIN BREAKS (6 gaps)
Price & currency risk (no hedging)
Payment & fraud risk (only 30-40% advance; fake rotten-goods photos)
Heavy documentation (IEC, RCMC, APEDA, remittance account)
Logistics broken (CHA chain, wrong vessel/ route, goods rot)
Wrong product-country-buyer fit (e.g. green chili to Australia ~75 days)
No verified buyer / payment terms / trust

4. HOW WE SOLVE IT
Amama = ONE comprehensive Cross-Border Agri-Tech Platform: a single connected journey with no broken links
Payment guarantee, currency hedging & credit (fixes payment + FX risk)
Managed logistics, CHA & documentation end to end (fixes logistics + paperwork)
In-house QC, sorting & packing; export vs domestic split (no waste)
Two models: Amama Pro (1 buyer-1 seller) + Amama Gold (many sellers fill 1 container)
Verified buyers & sellers + smart matching (fixes trust + product-country fit)
Result: exporting becomes as easy as 'just make good produce' - Amama handles everything else
Seller (farmer/trader) + Buyer arrive on Amama
Onboarding: separate flows for farmer / trader / buyer; documents collected
Verification: (1) documents (2) business-fit via AI + scraped data (3) trust/recovery via written T&C
KAM (Key Account Manager) assigned per category to both sides
Which model?
Pro (1 buyer + 1 seller)
Gold (many sellers fill 1 container)
Amama Pro - full transaction
Price locked?
Yes
No
Seller lists quality + price; buyer states need + price; negotiates on- platform (recorded)
Logistics engine plans the shipment
Seller accepts timeline?
Yes
No
Pick next vessel
Quality responsibility?
Trader
Farmer
Reverse-timeline from chosen vessel: departure to gate-close to port to inland transit to pack date
Trader: self-packs; Amama sends an empty container to seller's yard
Farmer: Amama trucks it in, does QC, sorts & packs at warehouse (Bombay/Mundra)
Local dry-port yard supplies reefer/normal container to seller
Export-grade exported; domestic-grade sold domestically (no waste)
Move to port; gate-in; Amama does freight + CHA + all docs & certifications; receipt issued
Vessel routing?
Transship
Direct
Via transshipment (e.g. Mundra)
Direct to destination
Who packed?
Amama packed
Trader packed
Amama packed = Amama person does destination QC
Trader packed = no Amama QC at destination
Delivered to buyer
Amama Gold - five cargo terminal trading
One live container listed (e.g. 29,000 kg)
Multiple small sellers bid & fill it with their quantities
Amama picks up all lots, QCs & packs centrally
Amama ships via its own logistics to its buyers
Payment, Finance & Settlement
Buyer pays Amama (incl. commission)
Currency hedged (bank-backed) - seller takes no FX loss
Amama pays seller; payment guaranteed (cancelled cheques held both sides)
Credit lines unlocked for repeat sellers/buyers with good track record
Transaction closed - revenue captured at every step: match fee, logistics, QC/packing, hedging, finance
